

PRODUCT INFORMATION

L-03 Work Positioning Lanyard/ Pole Strop

L-03 Work Positioning Lanyard

The L-03 combined work positioning lanyard and pole strop is designed for use with the Willans Harness types T20, T22/2, T23, T24 and T25.

In its standard form it is a 45mm wide adjustable webbing lanyard with a length, at full extension, of 2m. The lanyard is equipped at either end with a triangular ring. In this form it may be attached to the harness by means of BS EN 362 connectors.

The lanyard is manufactured to standards BS EN 354 and BS EN 358 and may, alternatively, be equipped with one triangular ring and one double acting snaphook or two double acting snaphooks. Details of these alternative configurations are available on request.

When used as a pole strop, the lanyard may be fitted with an accessory **webbing protective sleeve**, reference **L-03W**. This is designed to protect the lanyard against abrasion.

The L-03 is shown here fitted with an L-03W protective sleeve (not included).
