

PRODUCT INFORMATION

T25 Driller Work Positioning Harness

T25 Driller Harness

The Willans T25 Harness is manufactured under the ISO 9001:2000 quality system. It fulfils the requirements of European Standard BS EN 358 (Work Positioning Systems).

The T25 is equipped with three work positioning attachment points. These are:-

- 1.Rearward at waist level.
- 2.Frontal (leaning) at waist level.
- 3.Vertical (dorsal) at shoulder level.

The leaning pad is made from expanded neoprene and PU-coated, heavyweight texturised fabric to minimise water absorption. It is equipped with snaphook and ring fastenings for ease of donning when wearing gloves.

At the request of major offshore users, shoulder adjusting straps and their buckles have been fitted with rings and webbing loops. This makes for easier adjustment with gloved hands.

Further details on applications and usage are available in the T25 Driller information sheet.

Fibre identity polyester.
