

PRODUCT INFORMATION

T25 Banker Work Positioning Harness

T25 Banker Harness

Application: Work positioning - cuttings and embankments.

The Willans T25 Banker Harness is manufactured under the ISO 9001:2000 quality system. It fulfils the requirements of European Standard BS EN 358 (Work Positioning Systems).

The T25 is equipped with three work positioning attachment points. These are:-

- 1.Rearward at waist level.
- 2.Frontal (leaning) at waist level.
- 3.Vertical (dorsal) at shoulder level.

The leaning pad is made from expanded neoprene and PU-coated, heavyweight texturised fabric to minimise water absorption.

To facilitate the donning and adjustment of the harness while wearing gloves, fastenings are a simple snaphook and ring system. Shoulder adjusting straps and their buckles have been fitted with rings and webbing loops.

Further details on applications and usage are available in the T25 Banker information sheet.

Fibre identity polyester.
